**Scrape First
Scraper Mat**

**Volta® Electrostatic
Dissipative Mat**

UniFirst Mat Service

...it just makes sense

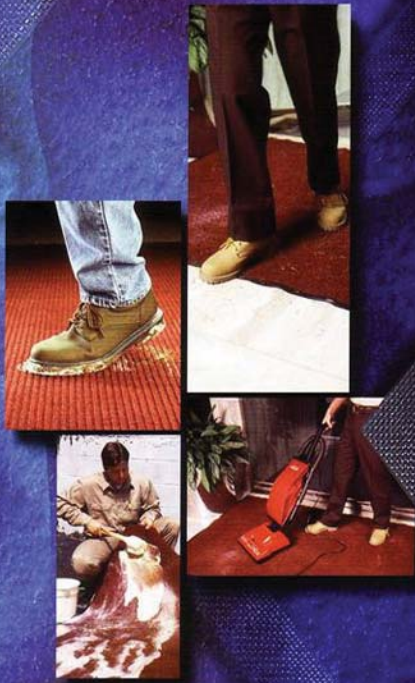

In order for carpet-style mats to work, they must be regularly cleaned.

If they aren't, they become a source of dirt rather than the solution to tracked-in soil and moisture they're supposed to be.

Vacuuming alone only gets out about 10% of trapped dirt. Real cleaning requires the regular use of soap and water.

Most purchased mat users don't have the supplies, equipment, staff, or time to do the job right.

UniFirst mats are solution-dyed nylon pile with durable nitrile rubber backing, resistant to the harmful effects of UV rays. Unlike our mats, "store bought" products often crack, fade, and warp when exposed to the elements.

THE SOLUTION? Let us do it instead! We'll supply you with superior quality, industrial grade, nylon-on-rubber mats. Then we'll come to your location on a regularly scheduled basis, pick-up your soiled mats for thorough professional laundering, and replace them with fresh ones.

That means no work, no administrative headaches, no downtime for you. And because we're textile maintenance experts, you'll get better mat performance and a cleaner workplace. Plus, with our low rental rates, you actually wind up paying less than if you handled it all yourself. **WHAT A DEAL!**
